

## Manage Secure SSL Certificates

A Secure SSL Certificate protects your customer information and helps prevent cyber theft. Most important, it tells your customers they can confidently shop on your secure site.

Hosting SSL Support Pack is required if you are hosting through us. The SSL support pack enables SSL and puts your Secure Certificate to work, automatically and seamlessly integrating with your hosting account.

To setup a new Certificate:

1. Click Setup New Certificate.

2. Under Set up New Certificate, indicate if you are hosting with us or with another provider.

- a. If you choose Here, select the hosting account you would like the certificate for.
    - click the button to install the Hosting SSL Support back and set up a Secure Certificate.
  - b. If you choose At a third-party provider, click the button to set up a Secure Certificate.
3. You will be transferred to Starfield Technologies' site to provide the required details for the certificate and continue the certificate setup.
